DESCRIPTORS- STATISTICAL ANALYSIS, *ITEM ANALYSIS, *QUESTIONNAIRES, *WORK ATTITUDES, STATISTICAL DATA, STUDENT ATTITUDES, *HIGH SCHOOL STUDENTS, *STUDENT CHARACTERISTICS, YOUTH OPINION QUESTIONNAIRE,

THE YOUTH OPINION QUESTIONNAIRE WAS DEVELOPED TO DETERMINE THE ATTITUDES, NEEDS, EXPECTATIONS, BELIEFS, AND PERCEPTIONS OF THRESHOLD WORKERS WITH REGARD TO THE WORLD OF WORK, THE DEMOGRAPHIC AND SOCIOECONOMIC FACTORS ASSOCIATED WITH THEM, AND THEIR RELATIONSHIP TO ENTRY WORK EXPERIENCE. AN INITIAL POOL OF APPROXIMATELY 600 ITEMS WAS COMPILED FROM SOURCES SUCH AS (1) BOOKS ON HIGH SCHOOL DROPOUTS, JUVENILE DELINQUENCY, AND LABOR MARKET EXPERIENCE, (2) RESEARCH STUDIES, AND (3) PUBLIC OPINION JOURNALS. THE ITEM POOL WAS SUBMITTED TO EXPERTS IN THE FIELD AND REVISED. IT WAS ADMINISTERED TO ALL 9TH, 10TH, 11TH, AND 12TH GRADE CLASSES IN SEVEN URBAN AND FIVE SUBURBAN SCHOOLS REPRESENTING HIGH, MIDDLE, AND LOW SOCIOECONOMIC CATEGORIES. A MINIMUM OF 1,000 STUDENTS AT EACH GRADE LEVEL AND 300 IN EACH SOCIOECONOMIC CATEGORY WAS SOUGHT. STATISTICAL DATA FROM AN ITEM ANALYSIS ARE PRESENTED IN 467 PAGES OF THE REPORT. EACH PAGE PRESENTS THE DATA FOR ONE ITEM. FOR EACH ITEM IS GIVEN (1) THE TOTAL NUMBER OF STUDENTS WHO ANSWERED THE ITEM, (2) THE RESPONSE DISTRIBUTION IN PERCENTAGES FOR THE TOTAL GROUP AND GROUPS CLASSIFIED ACCORDING TO EACH OF THE SEVEN BACKGROUND VARIABLES (SCHOOL, SEX, GRADE LEVEL, FATHER'S EDUCATION, FAMILY INCOME, WORK EXPERIENCE, AND SIBLING POSITION), AND (3) THE CHI SQUARE VALUE AND THE SIGNIFICANCE LEVEL FOR EACH OF THE SEVEN BACKGROUND VARIABLES. OTHER ITEM ANALYSES WERE IN PROGRESS FOR DEVELOPING A WORK ATTITUDE SCALE. (SL)

Technical Report No. 1

Item Analysis of the Development Pool of Items for the Youth Opinion Questionnaire

Prepared by

George B. Graen, Thomas E. Carroll,

René V. Dawis and David J. Weiss

This report is prepared in connection with the project, "Youth Unemployment: Frictions in the Threshold of the Work Career--An Exploratory Probe" conducted by the Industrial Relations Center under USDL Contract 81-22-01 with the Office of Manpower, Automation and Training, U.S. Department of Labor. Principal investigators are Professors Herbert G. Heneman, Jr. and René V. Dawis.

December, 1965

Acknowledgments

We wish to thank the following school principals and their staffs for their cooperation and assistance:

Mr. Ole E. Bakke, Phillips Jr.
Mr. Kenneth A. Berg, Highland Park Sr.
Mr. Harold E. Doepke, Wayzata Jr.
Mr. Robert St.Clair, Hopkins N. Jr.
Mr. Paul L. Halverson, Stillwater Jr.
Mr. Roald H. Johnson, Wayzata Sr.
Mr. Harold T. Lehto, Highland Park Jr.
Mr. Edward O. Monette, Stillwater Sr.
Mr. William J. Scanlan, Wilson Jr.
Mr. Albert B. Schultz, Henry Sr.
Mr. J. Howard Straiton, Nokomis Jr.
Mr. Robert A. Schanke, Monroe Sr.

We also wish to thank Drs. Donald Davis and Van Mueller of ERDC, Dr. Robert Rainey of Minneapolis Public Schools and Mr. Gordon Miniclier of St. Paul Public Schools, for their help.

Finally, we wish to thank the more than five thousand high school students who participated in the survey.

Item Analysis of the Development Pool of Items for the Youth Opinion Questionnaire

I. Purpose

This research project is designed to:

1. determine the attitudes, needs, expectations, beliefs, and perceptions of threshold workers with regard to the world of work;
2. determine the demographic and socioeconomic factors associated with these attitudes, needs, expectations, beliefs, and perceptions;
3. determine the relationship of these attitudes, needs, expectations, beliefs, and perceptions to entry work experience.

II. Method of Procedure

A. Development of the Youth Opinion Questionnaire.

1. Content

The opinion domains sampled in this study cover the following content areas:

a. vocational needs, i.e., what is important to the individual in an ideal job, the kind of job he would want to have;
b. expectations about labor market conditions: the kinds of jobs for which the individual is suited, how much he is "worth" in terms of pay, the kinds of tasks he would be doing;
c. perceptions of the individual concerning what is available in the job market, i.e., "supply," with respect to his expectations;
d. basic beliefs and values about work;
e. attitudes about work and leisure.

2. Item pool development and refinement.

An initial pool of approximately 600 items was compiled from a variety of sources (including books on high school drop-outs, juvenile delinquency, and labor market experience; research studies on school achievement, occupational adjustment and job satisfaction; public opinion journals). The item pool was reviewed by an advisory panel consisting of Drs. Marvin D. Dunnette, George W. England, Herbert G. Heneman, Lloyd H. Lofquist, Thomas A. Mahoney, Thomas F. Siess, and David J. Weiss of the Industrial Relations Center. Following their recommendations, items were rewritten and new items added to the pool, making a total of 642 items.

The support of the Educational Research and Development Council (ERDC) was sought for the project. (The ERDC is a non-profit organization of public school systems in the seven-county Twin Cities metropolitan area, and the College of Education of the University of Minnesota. One of its purposes is the coordination and conduct of a cooperative research program for the member schools.) The item pool was submitted to Dr. Van Mueller of ERDC for review. The item pool was also submitted to the research

directors of the Minneapolis and St. Paul school systems: Dr. Robert Rainey, Consultant in Educational Research, Minneapolis Public Schools, and Mr. Gordon Miniclier, Director of Research, St. Paul Schools. Principals in suburban school systems, Mr. R. Johnson of Wayzata Senior, Mr. Harold Doepke of Wayzata Junior and Mr. Robert St. Clair of Hopkins, made further recommendations. The item pool was revised in the light of the various recommendations.

3. Sampling

In accordance with the sampling plan, the experimental items were administered to all 9th, 10th, 11th and 12th grades classes in a sample of high schools. High schools in the Twin City metropolitan area were stratified into high, middle, and low socio-economic categories according to median income (derived from census tract data). A random sample of schools within each stratum was drawn. A minimum of 1000 students at each grade level was sought for the Development Sample. Within each grade level, a minimum of 300 students at each socio-economic category was sought.

B. Administration of the Questionnaire

The cooperation of twelve schools was secured for the development of the opinion questionnaire. These consisted of five senior and seven junior high schools. Only ninth grade students were surveyed in the junior high schools, while all grades in the senior high schools participated in the study. Seven schools (three senior and four junior) were urban (Minneapolis-St. Paul), while five (two senior and three junior) were suburban. The three urban senior high schools represented high, middle and low socio-economic categories and the two suburban senior high schools were classified in the high and middle categories.

Each school principal was visited prior to the actual administration of the questionnaire. At this time, the project (purposes, questionnaires, etc) was reviewed (in some instances, with the school counselors and other school personnel in attendance), and details of the administration procedure mapped out. Classes were selected, administration dates and times chosen, and administration personnel assignments made. (In every school, school staff members helped in the administration. In several schools, they actually undertook all or most of the tasks of administration.)

The development questionnaire contained four hundred sixty-seven experimental items covering the above content areas. Two items formats were used: one required the respondent to indicate whether he agreed, disagreed, or was undecided about the statement; the other required him to choose one of a pair of statements in response to a question, such as "Which would you rather be?" or "Which job would you prefer?" A maximum of 45 minutes was required for administration of the Questionnaire.

The experimental items were organized into six forms for purposes

of administration. Form A had 72 items; Form B, 91 items, Form C, 92 items; Form D, 71 items; Form E, 75 items; and Form F, 66 items. Form A,B, and C were of the "Agree-Undecided-Don't Agree" format, while Forms D,E, and F were of the "paired comparison" format. Each student was asked to complete only two forms. Forms were paired systematically with every other form in order to achieve a "nested" design. The questionnaires were administered in a standard manner, following standardized instructions. A copy of the administration instructions is included in the Appendix.

Before the questionnaires were distributed, the students were given copies of a letter describing the purpose of the research project and asking their cooperation. This letter was also read aloud to them at the start. A copy of the letter is shown in the Appendix.

Administration was by single class section in some schools and by whole grades (all sections combined) in other schools. Administration was completed in a single class period in some schools, in two or three periods in most schools, and required the whole school day (all periods) in a few schools. Practically all the participating students completed the two forms they received within thirty minutes from the time they started. Very few questions were raised about the item content. The two questions most frequently asked (in fact asked in practically every school) were about the meaning of "humanitarian" and "blue-collar". Other questions asked (much less frequently) concerned the apparent repetition of items, the repetitiousness of the "paired comparison" format, and the assumptions underlying the wording of some items.

C. Item Analysis

1. Item distributions

Responses to each item were processed and the data punched into tabulation cards. For each item, the number of individuals responding to each alternative was counted. The resulting frequency distribution for each item was converted to a percentage distribution. Items with a disproportionate percentage of responses in one alternative, i.e., 90% or more, were dropped from consideration for scale development.

2. Association with background variables.

Analysis of the relationships among eleven background variables for which data were available showed that seven of these were relatively independent and the remaining four were statistically and logically dependent on the first seven variables. These seven background variables were: school, sex, grade level, father's education, family income, work experience, and sibling position.

Item response distributions were analyzed with respect to each of the seven background variables listed above. The chi square test for independence of classification was used to test the hypothesis that classification according to background variable

was independent of classification according to response. That is, that groups classified according to a background variable did not differ in response to the item. Individuals not responding to an item or for whom relevant background data were not available were excluded from this analysis.

D. Scale Development.

The following analyses are in progress:

1. The item intercorrelations are being cluster analyzed to identify homogeneous groups of items.
2. Each item group is being scaled using the method of reciprocal averages.
3. Hoyt analysis-of-variance reliability coefficients are being calculated for each scale.
4. Inter-scale correlations are being calculated.
5. A factor analysis of the scale intercorrelations will be undertaken to interpret scale covariation.

E. Results

On the following pages are the results of the item analysis. Each page presents the data for one item. For each item is given the total number of students (N), who answered the item, and the response distribution in percentages (rounded to the nearest percentage point) for the total group and groups classified according to each of the seven background variables (school, sex, grade level, father's education, family income, work experience, and sibling position). The chi square value for the chi square test in each of the seven background variables is also given.

The items are identified as they appeared in their respective forms. The letter following "Item:" designates the questionnaire form in which the item appeared. The number following the letter designates the number of the item in the form. For example, "Item: A-1." indicates the first item of Form A.

The chi square test is interpreted as signifying whether or not the groups on any given background variable have similar response distributions. For example, on the background variable of sex, if for a given item the chi square value were not significant (N.S.), this would mean that the response distribution for the two sex groups were similar; or, in statistical terms, that the response distribution for the males was not more different from the female response distribution than one would expect by chance when the population response distributions for males and females were the same. In contrast, if the chi square value were significant at the .05 level (Sig .05), this would mean that the response distributions for the two sex groups were different; or, in statistical terms, that one would expect the sample response distributions for males and females to reflect this large a difference 5 times in 100 (or 1 in 20) or less on the basis of chance when the population response distributions were the same. This interpretation may be extended to the .01 level (Sig .01), i.e., once in a hundred times, and to the .001 level (Sig .001), once in a thousand times.

Item: A-1. Good pay would be the most important thing for me in taking a job.

Instructions for Administration

I. Make certain all students are seated and have copies of the letter to High School students.

II. Introduce yourself:

"My name is _____ of the University of Minnesota. I would like to read with you the letter you have just received. (Read letter aloud, ending with "We hope that you cooperate in this study.")

"Your class has been chosen to represent the 9th (10th, 11th, 12th) grade students in this school district."

III. "In a moment we will give each of you a booklet containing about 200 statements. This is not a test. There are no right or wrong answers to the statements in these booklets. We want you to give your opinion about a number of matters concerning work and jobs."

"In the booklets which we will pass out, there are two different kinds of statements. In some parts of the booklets, you are asked to say whether you agree or do not agree with the statements. In other parts, you are asked to say which of two things you like better."

"There are a great many questions about work and jobs that we want to ask of young people like you, but it would take too long if we asked each of you all of the questions. Therefore, each of you will receive only part of the questions we have prepared. Some of you may receive only statements where you are to say whether you agree or do not agree. Others will receive only statements where you are to say which of two things you prefer. Finally, some of you may receive booklets that have both kinds of statements."

"For both kinds of statements, answer frankly how you honestly feel about the statements. Your answers will be combined with those of other high school students, but every opinion is counted, so make yours count. We will now pass out the booklets."

Pass out booklets.

IV. After booklets have been passed:

"Before you begin, I would like you to fill out the second page of the booklet. This asks some information about you and your background. You do not have to write your name. If you have any questions about the second page, raise your hand and I will help you."

V. Allow about 2 minutes for the second page. When all are done, say:

"Now turn to the next page. Read the directions, and as soon as you're ready begin answering the booklet. Work as rapidly as you can. If you have any questions, raise your hand."

UNIVERSITY OF *Minnesota*

INDUSTRIAL RELATIONS CENTER - MINNEAPOLIS, MINNESOTA 55455

A letter to the students of _____ High:

We of the University of Minnesota are asking you to help us out in a research study. It is a study of what young persons like yourself think when you think about work and employment and jobs. We are doing this study for the Federal Government. What we find out will be useful in several government programs for young people, especially in training and employment programs.

We would like you to fill in the questionnaire that will be handed to you. We are asking you to answer the questions as frankly and honestly as you can. You do not need to write your name. (We hope this will encourage you to be more frank.) If there are any questions that you would rather not answer, do not answer them. Please feel free to do this. We do hope, of course, that you can answer them all.

Your answers will be kept in strictest confidence. Only authorized members of the research study staff, and absolutely no one else, will see your answers. And even to these authorized staff members, you will be known only by a code number.

We will be asking several thousand young persons like you to fill in these questionnaires. Only by asking a large number of people can we fully understand what you young persons think about work.

We hope that you will cooperate in this study.

Thank you.
